

Introduction to 100 Days of Code

=====

- Welcome to the 100 Days of Code challenge, where we will learn Python and become job-ready in just 100 days.
- We will use PythonAnywhere.com and Repl.it to practice coding.

What is Python?

- Python is a high-level, interpreted programming language created by Guido van Rossum in 1991.
- It is named after the British comedy group Monty Python's Flying Circus.
- Python is a simple and easy-to-learn language, making it perfect for beginners.

Features of Python

- **Simple** : Python is a simple language with a minimalistic syntax.
- **Open-source** : Python is free to use and distribute.
- **Cross-platform** : Python can run on multiple operating systems, including Windows, macOS, and Linux.
- **Large community** : Python has a large and active community, with many libraries and resources available.
- **Easy to integrate** : Python can be easily integrated with other programming languages, such as C and Java.

Applications of Python

- **Data science** : Python is widely used in data science and machine learning.
- **Web development** : Python can be used to build web applications using frameworks like Django and Flask.
- **Automation** : Python can be used to automate tasks and processes.
- **Scientific computing** : Python is used in scientific computing for tasks like data analysis and visualization.

Getting Started with Python

- We will use Repl.it to write and run our Python code.
- Repl.it is a cloud-based platform that allows us to write and run code in a web browser.
- We can create a new file and start writing code, and Repl.it will provide us with a console to run our code.

Key Takeaways

-

Python

is

a

simple

and

easy-to-learn

programming

language.

-

Python

has

a

large

community

and

many

libraries

and

resources

available.

-

Python

can

be

used

for

a

variety

of

applications,

including

data

science,

web

development,

and

automation.

- We will use Repl.it to write and run our Python code.

What's Next?

- In the next video, we will start learning the basics of Python programming.
- We will learn about variables, data types, and control structures.
- We will also start building small projects to practice our skills.

Call to Action

- Like and subscribe to the channel to get notified about new videos.
- Join the 100 Days of Code challenge and start learning Python today!
